Enviro Voraxial Technology Begins Revolutionary Grit Separation Demonstration Project in Tampa, Florida

FORT LAUDERDALE, FL.--(PRNewswire) - Mar. 18, 2004 - Enviro Voraxial Technology, Inc. (OTC Bulletin Board: [EVTN](#) - [News](#)) is pleased to announce the successful installation and start of operations of one of the Company's patented and revolutionary Voraxial Grit Separators at one of seven wastewater treatment facilities operated by the Hillsborough County Water Department which services greater Tampa, Florida. The system at Hillsborough incorporates a Model 4000 Voraxial Grit Separator at the head-works of the 5 million gallons per day (MGD) wastewater treatment plant. This installation initiates the sales and marketing campaign for the Voraxial Grit Separator into the multi-billion dollar municipal wastewater treatment market place. The Company has targeted three other multi-billion industries to concentrate its sales and marketing efforts.

The Problem.

Sand and grit are a major problem at wastewater treatment facilities as they 1) reduce the effectiveness of chemical & biological treatment, 2) reduce tank capacity and effectiveness of treatment, 3) increase equipment abrasion, which results in abnormal wear on pumps and operating mechanical equipment, and 4) increase the volume of biological sludge and its disposal costs. Further, sand and grit form heavy deposits in pipelines, channels and conduits, thus restricting flow and increasing pumping and maintenance costs.

The Solution.

The Voraxial Grit Separator increases the separation efficiency of sand and grit from the incoming waste stream, which reduces the overall operating expenses for wastewater treatment plants. In addition, since the Voraxial Grit Separator is scaleable and operates in-line, the need of costly grit chambers or grit pumping units may be eliminated altogether. The Model 4000 Voraxial Grit Separator has an operating range of 0.3 to 1.3 million gallons per day and has only one moving part.

"Having been in or around the wastewater business for 35 years, I believe this is truly a break-through in the industry. There is no other device that is capable of accomplishing what EVTN's Voraxial Grit Separator is doing," stated Frank J. DeMicco, the COO of

Enviro Voraxial Technology, Inc. "We intend to show that our new technology is more effective and less costly than conventional systems. Our technology can significantly reduce both the customer's plant construction and ongoing operating costs."

"Hillsborough County Water Department, under the leadership of Michael W. McWeeny is one of the most progressive utilities in the country and we are grateful for the opportunity to demonstrate the effectiveness of the Voraxial Separator," stated Alberto DiBella, President of Enviro Voraxial Technology, Inc. The test location in Hillsborough County is just one of over 16,000 publicly owned wastewater treatment facilities in the US that serve approximately 190 million people and process over 32 billion gallons of wastewater daily. Together, the seven Hillsborough facilities service over 108,000 customers and process nearly 26 million gallons of sewage per day.

About Enviro Voraxial Technology

Enviro Voraxial Technology, Inc.'s patented Voraxial Separator is a continuous flow turbo machine that efficiently separates mixtures of fluids or fluids and solids at extremely high flow rates while achieving very high levels of purity. The Voraxial Separator technology is scaleable and nearly universal in its implementation, thus making it applicable to almost any industry separation process. The technological superiority of the Voraxial Separator over conventional technologies is in its ability to produce a real-time, high "g" centrifugal force to yield a high purity product or products at a volume of 8 to over 10,000 gallons per minute. EVTN has and is continuing to develop and market its Voraxial Separator as stand-alone technology as well as incorporate it into self-contained, complete treatment systems for multiple applications.
