## **Enviro Voraxial Technology and TwinFilter To Deploy Voraxial Separator to FPSO**

FORT LAUDERDALE, FL.--(PRNewswire) – May 20, 2008 - Enviro Voraxial Technology, Inc. (OTCBB: [EVTN](#) - [News](#)) announced today that the Company received a purchase order to deliver and install a 2-stage Voraxial<sup>®</sup> Slopwater System to a FPSO (Floating, Processing, Storage, Offloading) customer off the Brazilian coast. This purchase order was received through EVTN's relationship with TwinFilter. The system, built according to industry's specifications, will optimize the customer's wastewater treatment system and reduce the operational costs of treating the slopwater.

The two-stage Voraxial<sup>®</sup> Slopwater System consists of an enhanced coalescer and the Voraxial<sup>®</sup> 2000 Separator, which will be used for 3-way (oil/water/solids) separation. The design flow rate of the system is 1,500 barrels of water per day (BWPD). This system is designed to remove the free oil and any solids from the slopwater prior to a polishing system. Upon completion of a successful installation and operation, the customer would require additional Voraxial Slopwater System for this specific facility.

“We are dedicated in providing our customers with the best available technology in the market. The Voraxial's compact footprint, light weight and no pressure loss requirement make it an ideal solution for our customers, especially our offshore customers. The Voraxial reduces our customers operational cost to treat their wastewater, which in this case is slopwater,” said Wijbrand Schouten, President of TwinFilter. “The combination of the Voraxial Separator with our unique filter technology gives the market an unparalleled system. We are starting to see the results of our marketing activities as significant interest is developing. We are excited at the market potential of combining our two technologies and expect additional deployments in the near future.”

### **About Enviro Voraxial<sup>®</sup> Technology**

Enviro Voraxial<sup>®</sup> Technology, Inc.'s patented Voraxial<sup>®</sup> Separator is a cost-efficient, continuous flow separator that simultaneously separates liquid/liquid, liquid/solid or liquid/liquid/solid mixtures at extremely high flow rates and without a pressure loss. The technological superiority of the Voraxial<sup>®</sup> Separator over conventional technologies is in its ability to produce a real-time, high "g" centrifugal force to yield a high-purity product or products at a volume of 3 gallons per minute to more than 10,000 gallons per minute.

The Voraxial<sup>®</sup> Separator technology is scaleable and universal in its implementation. Although the Voraxial<sup>®</sup> Separator is applicable to almost any industry separation process, the Company is focusing its near-term efforts in the following five vertical markets: oil exploration and production, oil refineries, mining, manufacturing and municipal wastewater industry.

EVTN is continuing to develop and market its Voraxial<sup>®</sup> Separator as stand-alone technology as well as a key component of a turnkey separation system to improve the efficiency of self-contained treatment systems for multiple applications.

## About TwinFilter

TwinFilter B.V. is a Dutch company, specializing in the design, engineering and production of filtration systems for a broad spectrum of industries, with a focus in the oil industry. Twin Filter has its own manufacturing facilities, which produces standard filter consumables for liquid, air and gas applications, along with custom made products for OEMs.

TwinFilter designs, engineers and manufactures a full range of filtration equipment and consumables. Our products and filtration support services are used globally, throughout a variety of industries such as oilfield, chemical, electronic and pharmaceutical, food & beverage markets. In addition, our products can also be found purifying air in museums, archives and paper processing.
